Postsecondary noncredit education has become an increasingly popular option for community college students in recent years. At many two-year institutions, noncredit education enrolls more students than do credit programs. The following is an excerpt from a recent report published by the Community College Research Center, part of the Teachers College at Columbia University in New York.

The study, The Landscape of Noncredit Workforce Education: State Policies and Community College Practices, was conducted with financial support from the nonprofit Sloan Foundation. Its authors use several case studies to examine the growth of workforce instruction and contract training programs at the nation’s community colleges, noting that the widespread expansion of such programs “raises fundamental questions about whether colleges are keeping pace with student and workforce needs, using resources efficiently, and providing access to all students.” What’s more, they say, “the answers may challenge current state policies and college practices.” Decide for yourself.

Examining Noncredit Workforce Programs
The study, conducted in collaboration with the National Council for Workforce Education and the National Council for Continuing Education and Training, focused on noncredit work-
“AACC Executive Search absolutely brought us a much better pool of candidates, including people we would not have seen any other way.”

Put the visibility, credibility and network of your national association behind executive recruitment for your college. Working with highly experienced recruitment specialists, the AACC Executive Search service helps you recruit high-level administrators and faculty below the CEO level, using:

- advanced screening technologies to ensure candidate integrity
- customized menu of services to provide the right “fit” and the best candidate
- proven, 15-step search process
- national database of diverse and qualified applicants

Save time. Save money. Hire smart.

“Community college noncredit students...tend to be older and interested in gaining skills.”

force instruction and contract training in community colleges. Specifically, it examined questions pertaining to the following: (1) the extent to which noncredit workforce education and state policies play a role in workforce development, provide disadvantaged groups with access to higher education, and generate revenue for the college; (2) the way colleges organize their noncredit workforce education programs to balance the tradeoffs between the desired flexibility of noncredit education and the integration of noncredit education with credit programs; and (3) the extent to which noncredit workforce education provides students with recorded outcomes, such as transcripts or industry certifications, and the extent to which outcomes data are available.

The study drew on two key sources of information. First, state policies on the funding and regulation of noncredit workforce education were reviewed in all 50 states by interviewing individuals in a variety of state departments with oversight for community colleges and/or workforce development. Second, case studies of 20 community colleges in 10 states were conducted by interviewing key administrative staff at each college. The colleges were selected to reflect innovative practices in noncredit workforce education, as well as a range of institutional sizes, locations, and states.

The Many Roles of Noncredit Workforce Education

As a local resource for workforce development, community colleges serve many individuals seeking noncredit workforce education for a variety of reasons and a wide range of industries needing employees at different skill levels. Community college noncredit students have diverse educational backgrounds and tend to be older and interested in gaining skills. To bring students interested in pursuing a degree into credit programs, colleges use a variety of program features, such as recruiting noncredit students to credit programs and developing links between noncredit and credit programs. To support student noncredit enrollment, more than half of the states provide general funds for community college noncredit workforce education, which may provide an important indication of the state’s vision for noncredit education. More than half the states have guidelines for defining what qualifies as a noncredit workforce course.

In addition to meeting the needs of students, community colleges’ noncredit programs seek to meet specific employer needs at state and local levels. Some of them have developed flexible ways to offer courses in response to employer demand. Most states provide funds for workforce training and economic development, and just over half specify a direct role for community colleges as fiscal agents or preferred providers.

Community colleges also have a goal of revenue generation for many of their noncredit workforce programs. They are free to charge what the market will bear; few states place limits on the amount schools may charge for noncredit workforce courses. Many community college noncredit programs are, or plan to become, self-supporting or profit-generating in order to add value to the college and secure broader support within the college. Successfully serving students and employers while also generating profits is a challenge for community colleges that requires careful thought and consideration.

The Organization of Noncredit Workforce Education in Community Colleges

The place of noncredit workforce education programs within the college’s overall structure may have important implications for how programs operate and what they achieve. Community colleges use a range of organizational approaches, including both separate structures (in which the noncredit program is a distinct organizational unit within the college) and integrated structures (in which noncredit programs are interspersed among the college’s academic units by content area). Regardless of organizational structure, colleges use a variety of strategies to achieve collaboration between programs, as well as flexibility in noncredit operations. Noncredit programs with separate organizational structures coordinate their activities through regular meetings and communication throughout the college to encourage collaboration, avoid duplication and allow movement between noncredit and credit programs. Conversely, noncredit programs with integrated organizational structures...

Outcomes From Noncredit Workforce Education
Since noncredit workforce education is not regulated by the academic rules that govern credit education, recorded student outcomes from participating in a noncredit program vary and serve different needs. While only a few states have guidelines for including noncredit courses on a transcript, many case-study colleges provide transcripts for noncredit workforce courses. Case-study college noncredit programs offer a range of industry certifications, but many noncredit offerings are not associated with such certification.

The colleges therefore rely on external sources of validation to award Continuing Education Units for noncredit courses to meet industry demands. Some states and many community colleges have guidelines that could facilitate the retroactive granting of credit for noncredit courses, but their use in colleges is rare. Many states and colleges also reported interest in procedures for articulating noncredit programs with credit programs. The value of various recorded outcomes differs depending on the needs of students and employers.

With respect to reporting requirements for noncredit workforce education, many states tie reporting to funding and several are seeking to collect more comprehensive data. State data systems can facilitate data collection for reporting requirements, but they must account for the unique format of noncredit programs. Case study colleges without state noncredit reporting requirements rarely collect noncredit data for their own purposes. The colleges reported several barriers to data collection, including their inability to collect information from some students, the non-traditional time frame of some courses, and poor data systems. A fuller understanding of the needs and outcomes of individuals and employers who seek noncredit workforce education is vital to determining which programs and recorded outcomes are of most value for which students.

Conclusions and Recommendations
Noncredit workforce education can play an important role in responding to local labor-market demands by meeting the workforce needs of employers and the needs of students for immediate skills. It can also benefit students by providing access to credit programs generating meaningful recorded outcomes for a range of student needs and facilitating the long-term pursuit of degrees. Community college noncredit workforce education can have a central role in states that choose to prioritize funding to support career pathways as part of their workforce development agenda by connecting short-term training to programs leading to degrees and credentials. The findings from this study lead to key recommendations:

• Provide state funding for noncredit workforce education with clear and targeted goals that promote workforce development and help students access credit education by cultivating better ties to career pathways.
• Increase coordination between credit and noncredit programs to benefit students and employers.
• Better assess student needs and support efforts to recognize credit students into credit programs and to articulate noncredit and credit programs to promote student transfer, when appropriate.
• Explore the development of non-degree forms of validation for all noncredit workforce education to record outcomes that promote the portability of evidence of skills for students and accountability for colleges and state workforce education funds.
• Collect more information on individuals and employers’ noncredit workforce education outcomes to assess the value of noncredit workforce education to students, employers, and the economy.

Michelle Van Noy is a senior research assistant at the Community College Research Center (CCRC). James Jacobs is CCRC’s associate director for community college operations. Suzanne Roberts is director of workforce education at City College of San Francisco. Thomas Bailey is the director of CCRC, and Katherine L. Hughes in CCRC’s assistant director for work and education reform research.

Online Registration is Now Open for the 2009 CCSSSE and CCFSSE Spring Surveys!
The Community College Survey of Student Engagement (CCSSSE) serves as a valuable tool for assessing quality in community college education. CCSSSE results are used nationwide for improving student engagement, learning, and retention.

CCSSSE reports enable colleges to
• benchmark and gauge their performance in comparison with colleges across North America
• plan strategically
• respond to accrediting agencies
• review internal programs and practices

Through spring 2009, CCSSSE survey respondents—more than 70,000 of them—cumulatively represent a total credit enrollment of more than 3.8 million students across more than 1,050 different community colleges from 49 states, British Columbia, Nova Scotia, and the Marshall Islands.

CCFSSE member colleges are invited to join the Community College Faculty Survey of Student Engagement (CCFSSE). This online survey elicits information about faculty teaching practices, the ways they spend their professional time – both in and out of class – and their perceptions regarding students’ educational experiences. Faculty from more than 14 colleges nationwide have completed the survey to date.

All colleges must register by the November 1, 2008 deadline. For more information, or to access online membership registration, click the link.
